Motivation

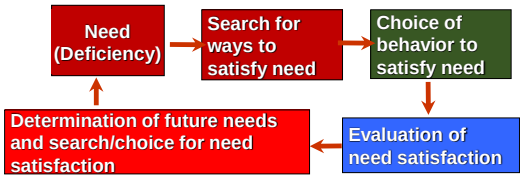
What Motivates you?

The fact that you aren't where you want to be should be enough **motivation.**

Motivation

The set of forces that cause people to behave in certain ways.

The Motivation Framework



Categories of Motivation Theories

- **Content Theories of Motivation**
  - **WHAT motivates us**
- **Process Theories of Motivation**
  - **WHY and HOW motivation occurs**
- **Reinforcement Theory**
  - **HOW outcomes influence behaviors**

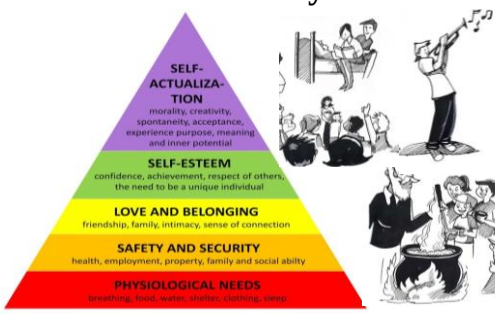
Content Perspectives on Motivation

Approaches to motivation that try to answer the question,
"What factors in the workplace motivate people?"

Content Perspectives of Motivation

- ***Maslow's Hierarchy of Needs***
- ***Aldefer's ERG Theory***
- ***Herzberg's Two-Factor Theory***
- ***McClelland's Achievement, Power, and Affiliation Needs***

Maslow's Hierarchy of needs



Physiological Need

- The basic requirements needed to survive
- These needs can be classified as the most primary needs of a human.
- Examples-
  Air, Water, Food, Sleep, Health

Physiological needs are the most basic and fundamental needs that human beings require for survival and well-being. These needs are at the bottom of the hierarchy and must be satisfied before an individual can move on to fulfilling higher-level needs.

Physiological needs include:

- **Air:** breathing is essential for survival. Oxygen is needed by the body's cells to produce energy through cellular respiration.
- **Water:** adequate hydration is necessary for bodily functions. Water helps regulate body temperature, transport nutrients, and eliminate waste products.
- **Food:** nutritious food provides the body with energy and essential nutrients that support growth, repair, and maintenance of bodily tissues.
- **Shelter:** protection from the elements, including a safe and comfortable place to rest, is crucial for maintaining overall health and well-being.
- **Sleep:** adequate and restful sleep is necessary for physical and mental rejuvenation. Sleep supports cognitive functioning, emotional regulation, and overall vitality.
- **Clothing:** appropriate clothing helps regulate body temperature and protect the body from external environmental factors.
- **Sexual reproduction:** while not a direct requirement for an individual's survival, the instinct for sexual reproduction is considered a part of physiological needs for the survival of the species.

Safety Needs

- The physiological needs are largely taken care of, this second layer of needs comes into play.

  You will become increasingly interested in finding safe circumstances
- Examples-
  Physical security, Economic security, Freedom

These needs arise from the human desire to feel protected from harm, danger, and threats. Here are some components of safety needs:

- **Personal security:** this includes protection from physical harm, danger, and violence. Individuals seek environments where they feel safe from potential threats.
- **Financial security:** the need for stability and economic security is vital. People want to have enough resources to meet their basic needs and avoid financial instability.
- **Health and well-being:** safety also involves maintaining good health and well-being. Access to healthcare, medical services, and a healthy lifestyle are essential components.
- **Stability and order:** people generally seek predictability and stability in their lives. They want to feel that their surroundings and circumstances are consistent and organized.
- **Emotional security:** this aspect refers to the need for emotional stability and support. Individuals want to be in environments where they feel emotionally secure and have positive relationships.
- **Protection from threats:** this includes protection from not only physical threats but also emotional and psychological threats. It encompasses being shielded from discrimination, bullying, and other harmful behaviors.
- **Secure employment:** having a stable job and income contributes to a sense of security and stability.

Love & Belonging Needs

- When physiological needs and safety needs are, by and large, taken care of, a third layer starts to show up.
- You begin to feel the need for friends, a partner, children, affectionate relationships in general.
- Examples-

  Acceptance, Group membership, Love & affection

These needs include:

- **Friendship:** The need for companionship, camaraderie, and the sense of having close friends with whom one can share experiences and emotions.
- **Intimacy:** This refers to the desire for close, personal relationships characterized by emotional openness, trust, and mutual understanding. Intimate relationships can be romantic, familial, or deeply platonic.
- **Family:** The need for connection and belonging within one's family unit. Strong family ties provide emotional support, a sense of identity, and a feeling of being loved and valued.
- **Social Groups:** Being part of social circles, communities, or groups that share common interests, values, or activities. Being part of a larger community can fulfill the need for a sense of belonging.
- **Affection and Acceptance:** The need to give and receive affection, care, and acceptance from others. This can involve gestures of kindness, validation, and emotional support.
- **Sense of Belonging:** Feeling accepted and valued as a member of a group or community. This need is related to feeling included, understood, and respected.

The fulfillment of love and belongingness needs contributes to a sense of emotional well-being, self-esteem, and overall happiness. Lack of fulfillment in these areas can lead to feelings of loneliness, isolation, and emotional distress.

Esteem Needs

- Maslow noted two versions of esteem needs, a lower and a higher one.
- Examples for the lower one-

  - respect of others, the need for status, fame, glory, recognition, attention, reputation, appreciation, dignity, even dominance
- Examples for the higher one

  - confidence, competence, achievement, mastery, and freedom

Esteem needs are about self-respect, self-esteem, and the desire for recognition and appreciation from others. Once individuals have satisfied physiological, safety, and love and belongingness needs, they strive to gain a positive self-image and achieve a sense of accomplishment. Esteem needs can be classified into two categories:

- **Esteem from Others (External Esteem):** This refers to the need for recognition, admiration, and approval from others. It includes receiving praise, acknowledgment, and respect for one's achievements and contributions.
- **Self-Esteem (Internal Esteem):** This involves the need to develop a strong sense of self-worth, self-confidence, and self-respect. It's about feeling competent, capable, and believing in one's abilities.

Esteem needs play a significant role in an individual's self-concept and self-esteem. When these needs are met, people experience feelings of competence, mastery, and confidence. However, if these needs are consistently unfulfilled, individuals might struggle with feelings of inadequacy, inferiority, and low self-esteem.

It's important to note that the pursuit of esteem needs can sometimes lead to unhealthy behaviors, such as seeking excessive external validation or engaging in self-destructive behaviors in an attempt to gain recognition.

Self actualization Needs

- The last level is a bit different.
- They involve the continuous desire to fulfill potentials, to "**be all that you can be.**" They are a matter of becoming the most complete, the fullest, "you"
- Examples-

  More challenging work, Opportunities for innovation through creativity identifies ones full potential

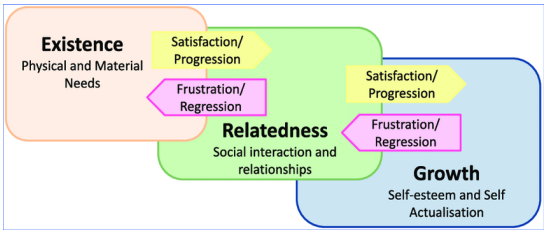
Self-actualization is the pinnacle of Maslow's hierarchy and represents the fulfillment of an individual's highest potential and personal growth. It's about striving to become the best version of oneself and achieving a sense of self-fulfillment. Self-actualization needs involve:

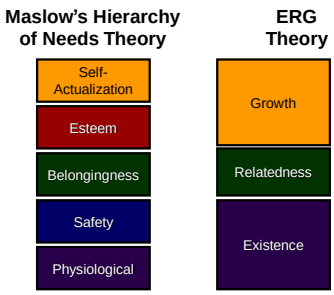
- **Personal Growth:** The continuous pursuit of personal development, self-discovery, and self-improvement. Individuals seek to expand their knowledge, skills, and abilities.
- **Realization of Potential:** Striving to realize and utilize one's unique talents, abilities, and strengths to their fullest extent.
- **Autonomy and Independence:** Seeking self-reliance and the ability to make decisions based on personal values, rather than being solely influenced by external factors.
- **Creativity and Problem-Solving:** Engaging in creative endeavors, exploring new ideas, and finding innovative solutions to challenges.
- **Peak Experiences:** Experiencing moments of intense joy, satisfaction, and profound connection with the self, others, and the world.
- **Self-Transcendence:** Going beyond one's individual needs and concerns to contribute to the well-being of others or a greater cause.

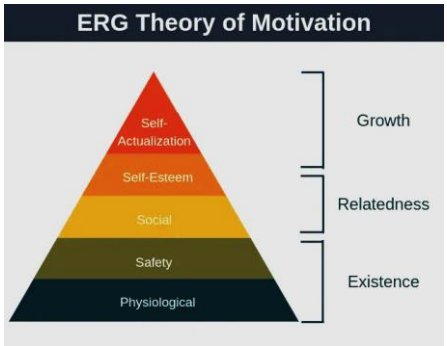
It's important to understand that self-actualization is not a fixed state but a continuous process. Few individuals fully achieve self-actualization in the way Maslow described it, but many people strive to attain greater personal growth and self-awareness throughout their lives.

ERG Theory

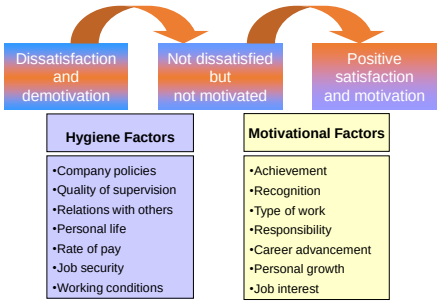
- Existence needs - Physiological
- Relatedness needs - How one individual relates to his/her social environment
- Growth needs - Achievement and self actualization







Herzberg's Two-Factor Theory



Hygiene Factors (Dissatisfiers): These are external factors that are related to the work environment and the context in which employees perform their jobs. While the presence of hygiene factors might not directly lead to increased job satisfaction, their absence or inadequacy can lead to dissatisfaction.

Hygiene factors include:

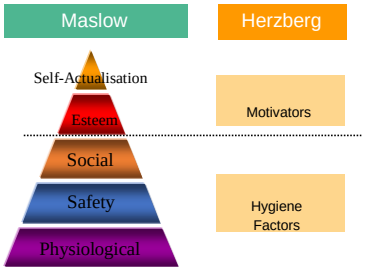
- **Salary and Compensation:** The amount of pay and benefits received by employees.
- **Working Conditions:** The physical and environmental aspects of the workplace, such as comfort, safety, and equipment.
- **Job Security:** Employees' perception of the stability of their job.
- **Company Policies:** The fairness and consistency of organizational policies and procedures.
- **Supervision:** The quality of management and the relationship between employees and their supervisors.
- **Interpersonal Relationships:** The interactions and relationships with colleagues and superiors.

Motivational Factors (Satisfiers): These are internal factors that are related to the actual content and nature of the work itself. The presence of motivational factors can lead to increased job satisfaction and motivation. Motivational factors include:

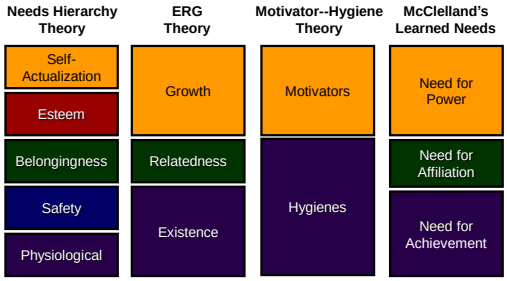
- **Achievement:** The feeling of accomplishment and personal growth through completing challenging tasks.
- **Recognition:** Receiving acknowledgment and praise for one's contributions and efforts.
- **Responsibility:** Having a sense of ownership and control over one's work and decision-making.
- **Advancement:** Opportunities for career development and progression within the organization.
- **Growth:** The chance to learn new skills and take on more complex and meaningful tasks.

Herzberg's theory suggests that managers and organizations need to address both hygiene factors and motivational factors to create a work environment that fosters employee satisfaction and motivation. Improving hygiene factors can help prevent dissatisfaction, but it doesn't necessarily lead to increased job satisfaction.

Needs Theories



Content Theories of Motivation



Process Perspectives of Motivation

- Why people choose certain behavioral options to satisfy their needs and how they evaluate their satisfaction after they have attained their goals.

Process perspectives of Motivation

•Expectancy Theory
•Equity Theory
•Goal Setting Theory

Expectancy Theory

Valence - value or importance placed on a particular reward

Expectancy - belief that effort leads to performance

Instrumentality - belief that performance is related to rewards

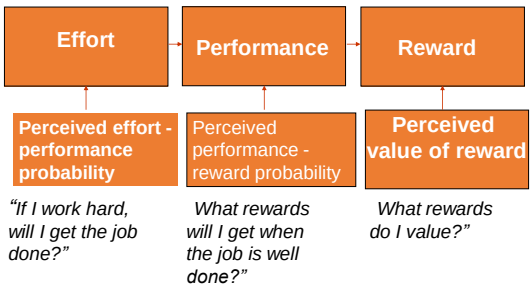
Expectancy Theory

M = E x I x V

- For motivated behavior to occur:
  Effort-to-performance must be greater than 0
  Performance-to-outcome must be greater than 0
  Sum of valences must be greater than 0*

  * One or more valences may be negative!

Expectancy Model of Motivation



Extrinsic Rewards

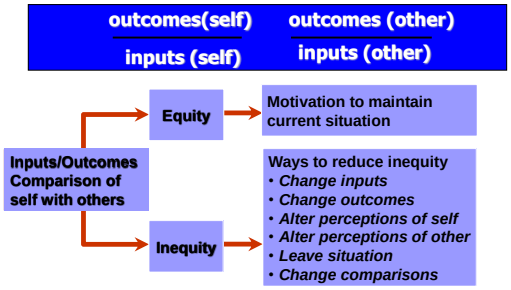
Positively valued work outcomes given to the individual by some other person such as a supervisor or a work group.

Intrinsic Rewards

Positively valued psychological reward that the individual receives directly as a result of task performance.

Equity Theory

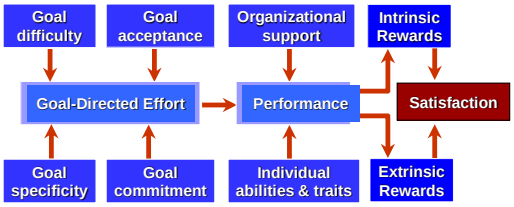
- Individuals equate value of rewards to effort and compare it to other people.



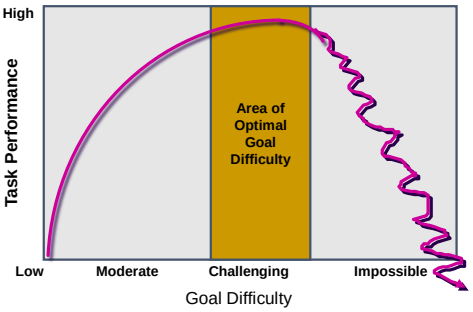
Goal-Setting Theory

- Difficulty
  - Extent to which a goal is challenging and requires effort.
- Specificity
  - Clarity and precision of the goal.
- Acceptance
  - Extent to which persons accept a goal as their own.
- Commitment
  - Extent to which an individual is personally interested in reaching a goal.

Goal-Setting Theory



Effect of Goal Difficulty on Performance



Content Vs Process

- Content theories
  - explain why people have different needs at different times
- Process theories
  - describe the processes through which needs are translated into behavior

Reinforcement Theory

- The administration of a consequence as a result of a behavior.
- Proper management of reinforcement can change the direction, level, and persistence of an individual's behavior.

Stimulus → Response → Consequences → Future Response

Reinforcement Theory

- Law of effect.
  - Behavior that results in a pleasant outcome is likely to be repeated while behavior that results in an unpleasant outcome is not likely to be repeated.

Organizational behavior modification (OB Mod)

- The systematic reinforcement of desirable work behavior and the non reinforcement or punishment of unwanted work behavior.
- Uses four basic strategies:
  - Positive reinforcement.
  - Negative reinforcement.
  - Punishment.
  - Extinction.

Reinforcement Contingencies

- Positive Reinforcement - The use of positive consequences to encourage desirable behavior
- Avoidance Learning - Learning that occurs when individuals change behavior to avoid or to escape unpleasant circumstances.
- Punishment - Application of negative consequences to stop or correct improper behavior
- Extinction - The absence of re-enforcement for undesirable behavior so that the behavior stops recurring

Positive reinforcement

- The administration of positive consequences to increase the likelihood of repeating the desired behavior in similar settings.
- Rewards are not necessarily positive reinforces.
- A reward is a positive reinforce only if the behavior improves.

Principles governing reinforcement.

- Law of contingent reinforcement.
  - The reward must be delivered only if the desired behavior is exhibited.
- Law of immediate reinforcement.
  - The reward must be given as soon as possible after the desired behavior is exhibited.

Scheduling reinforcement.

- Continuous reinforcement.
  - Administers a reward each time the desired behavior occurs.
- Intermittent reinforcement.
  - Rewards behavior periodically — either on the basis of time elapsed or the number of desired behaviors exhibited.

Negative reinforcement.

- Also known as avoidance.
- The withdrawal of negative consequences to increase the likelihood of repeating the desired behavior in a similar setting.

Punishment

- The administration of negative consequences or the withdrawal of positive consequences to reduce the likelihood of repeating the behavior in similar settings

Implications of using punishment.

- Punishing poor performance enhances performance without affecting satisfaction.
- Arbitrary and capricious punishment leads to poor performance and low satisfaction.
- Punishment may be offset by positive reinforcement from another source.

Extinction

- The withdrawal of the reinforcing consequences for a given behavior.
- The behavior is not <u>unlearned</u>; it simply is not exhibited.
- The behavior will reappear if it is reinforced again.

What are the Characteristics a leader should have?

Good Leader Qualities	Bad Leader Qualities
- Kind	- Violent
- When someone makes a mistake, the leader says, "it's ok, you can try again."	- They steal
- Help people when they are in trouble	- They don't protect other people
- Come up with solutions	- They only care about themselves
- Don't use violence	- They lie
- Generous	- Rude
- Honest	- They order people around
- Aren't wasteful	- They blame other people
- Good at listening	- They don't protect the environment
- Work with a team	- Selfish
- Try to make other people better	- They aren't good at solving problems
- Smart	- They don't like to listen
- Always try their best	- Afraid to look bad
- Not afraid to make mistakes	- Not smart
- Protect the community	- Only like to work by themselves
- Use time well	- Time waster
	- They make other people feel bad

LEADRSHIP

- As a **process**, leadership is the use of non-coercive influence to direct and coordinate the activities of group members to meet a goal.
- As a **property**, leadership is the set of characteristics attributed to those who are perceived to use such influence successfully.
- "Non-coercive" describes an approach that does not use threats, force, or manipulation to achieve compliance or influence others. Instead, it relies on voluntary means, positive persuasion, or influence through connection and trust to encourage desired actions and behaviors. Examples include non-coercive parenting, which focuses on collaboration and deep connection, and non-coercive marketing, which aims to build trust rather than using pressure.

Leading

Leading is the process of influencing and inspiring the behavior of individuals and groups towards the achievement of organizational goals and objectives.

Leadership and Management Are Not the Same!!!
You can be a manager due to your position. But your position doesn't mean you can influence employees as a true leader.

"Management is doing things right,
Leadership is doing the right thing"
(Warren Bennis and Peter Drucker)

Leadership vs. Management

***What* is done**

- Establish a vision
- Imaginative ideas
- help others to understand vision
- Inspire others
- Produce change

***How* tasks are done**

- Plan and budget
- focus on process and system
- organize and staff
- take control and problem solve
- produce order and stability

Excellent Leaders Must be Able to;

- Direct and guide the organizational members with a vision.
- Productively communicate with all the parties.
- Create a conducive work culture.
- Positively motivate all the parties.
- Successfully introduce changes.

Trait Approaches to Leadership

- Early researchers believed that leaders had unique qualities or traits that distinguished them from their peers.
- Trait research has focused on identifying leadership traits, developing trait measurement methods, and using the methods to select leaders
- The trait approach has been largely unsuccessful in identifying universal leadership characteristics.
- Current trait research focuses on drive, motivation, integrity, and other traits that are common among effective leaders.

Trait Approach

- Traits (examples)
  - Extraversion
  - Conscientiousness
  - Openness
- **Assumption: Leaders are born**
- Goal: Select leaders
- Problems
  - Traits do not generalize across situations
  - Better at predicting leader emergence than leader effectiveness

Limitations

- **No universal traits found that predict leadership** in all situations.
- Unclear evidence of the cause and effect of relationship of leadership and traits.
- Better predictor of the appearance of leadership than distinguishing effective and ineffective leaders.

Behavioral Approach to Leadership

- In the late 1940s, the emphasis shifted to determining what behaviors are associated with effective leadership.
- The goal of the behavioral approach was to The determine what behaviors are associated with effective leadership.

Behavioral Approach

- Ohio State Studies/U. of Michigan
  - Initiating Structure/Production Orientation
  - Consideration/Employee Orientation
- **Assumption: Leaders can be trained**
- Goal: Develop leaders
- Problem: Effective behaviors do not generalize across situations

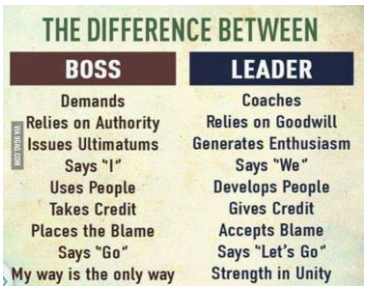
Behavioral theory Vs Trait theory

- **Behavioral theory:**
  Leadership behaviors can be taught.

- **Trait theory:**
  Leaders are born, not made.

Leadership Functions

- **Task Related Roles**
- **Group Maintenance Roles**



Task Related Roles:

- Initiating activity
- Seeking information
- Giving information
- Elaborating
- Coordinating
- Summarizing
- Testing feasibility

Group Maintenance Roles

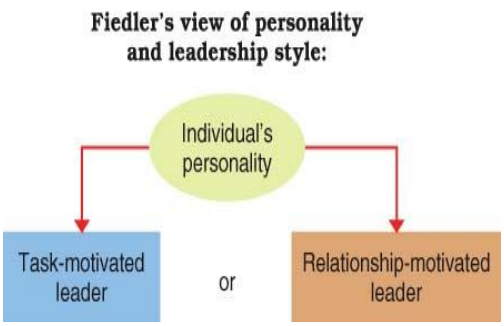
- Encouraging
- Gate-keeping
- Standard setting
- Expressing group feelings
- Diagnosing
- Compromising
- Harmonizing
- Consensus testing
- Following

Leadership Style

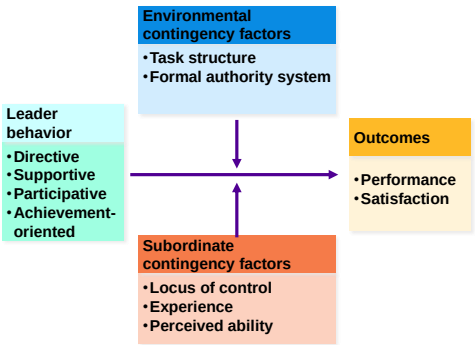
- **Autocratic Style**
  - Acts in unilateral command and control fashion
- **Human Relation Style**
  - Emphasizes people over tasks
- **Democratic Style**
  - Encourages participation with an emphasis on both task accomplishments and development of people
- **Lassize-faire Style**
  - Is low on both tasks and people

Leadership Style

- According to Fiedler, a leader's style is an enduring personal characteristic. Fiedler created the *least preferred coworker (LPC)* scale to measure it.
- **Relationship-oriented** :
  want to be liked by and to get along well with their subordinates.
- **Task-oriented** :
  want their subordinates to perform at a high level and accomplish all of their assigned tasks.



Path-Goal Theory



Path-Goal Theory

- According to House, there are four different types of leadership styles depending on the situation:
  - ***Directive***: characterized by a leader who informs subordinates what is expected of them and provides specific guidance.
  - ***Supportive***: characterized by a leader who is friendly and approachable and shows concerns for the status, well-being, and personal needs of the subordinates.
  - ***Participative***: characterized by a leader who consults with subordinates and asks for their suggestions before making a decision.
  - ***Achievement-oriented***: characterized by a leader who sets challenging goals, expected subordinates to perform at best, and shows confidence that subordinates will perform well.

Examples of Hypotheses from Path-Goal Theory

- When tasks are ambiguous and stressful, subordinates will prefer directive leadership; when tasks are highly-structured and well-laid out, subordinates will prefer supportive leadership
- When subordinates are in a team environment that offers great social support, the supportive leadership style becomes less necessary
- When subordinates have high ability and considerable experience, directive leadership will be perceived as redundant
- Subordinates with an internal locus of control will be more satisfied with a participate style

Other Types of Leadership

Charismatic

Transformational

Transactional

Entrepreneurial

What is a Charismatic Leader?

- **An enthusiastic, self-confident leader whose strong personality and actions influence people to behave in certain ways. Often visionary. Will often take risks to achieve vision, and exhibit behavior that is out of the ordinary.**

Charismatic Leadership

- Often **Transformational and Charismatic** leadership are used interchangeably.
- Charismatic traits and behaviors
  - Advocates a vision
  - Not keeper of the status quo – behavior is out of the ordinary – perceived as change-agent
  - Acts in several unconventional ways – counter to norms
  - Willingly makes self-sacrifices, takes personal risks, to support their vision
  - Strong self-confidence

චමත්කාරජනක

What is a Transformational Leader?

- Someone Who:
  - Inspires others to transcend their own self-interests and work for the larger good of the organization.
  - Articulates a vision that convinces subordinates to make major changes.
  - Possesses charisma.
  - Can have a profound belief on followers' beliefs and values – actually change you (goes beyond charisma)

Characteristics of Transformational Leaders

- **Charisma**: Provides vision and sense of mission, instills pride, gains respect and trust.
- **Inspiration**: Communicates high expectations, uses symbols to focus efforts, expresses important purposes in simple ways.
- **Intellectual Stimulation**: Promotes intelligence, rationality, and careful problem solving.
- **Individualized Consideration**: Gives personal attention, treats each employee individually, coaches, advises.

Examples of Transformational Leaders

- Bill Gates (Microsoft)
- Steve Jobs (Apple)
- Michael Dell (Dell Computer)
- Jeff Bezos (Amazon.com)
- Lou Gerstner (IBM)
- Jack Welch (GE)

Characteristics of Transactional Leaders

- **Contingent Reward**: Contracts exchange of rewards for effort, promises rewards for good performance, recognizes accomplishments.
- **Management by Exception (active)**: Watches and searches for deviations from rules and standards, takes corrective action.
- **Management by Exception (passive)**: Intervenes only if standards are not met.

Can Leadership Be Taught?

- Leadership training is big business!
- Highly motivated individuals are more successful at leadership training
- People can be taught how to:
  - Be "charismatic" (eye contact, gesture, voice)
  - Analyze situations and learn about different leadership styles
  - Implement
  - Build trust
  - Mentor
- But hard to "teach": Visioning, strong personality, passion, walk the talk, risk-taking

Transformational Leadership

- "Transformational" leaders are focused on "transforming" their employees' priorities to reflect the interest of the group. This involves the use of collaboration and open communication.
- Transformational leaders influence people and events.
- Most women identify themselves this way.

Transactional leadership

- Leaders who engage in "transactions" with employees, such as using rewards to encourage good performance and punishment for inadequate performance.
- Transactional leaders rely heavily on power from their organizational position and status.
- Research shows that most men describe themselves this way.

Transactional Leadership	Transformational Leadership
Extrinsic Motivation	Intrinsic Motivation
Routine changes	Major organisational changes
Rewards based	Inspiration & Motivation
Planning & Budget	Vision & Direction
Motivated by self-interest	Motivated by vision
Short term thinking	Long term thinking
