
ORGANIZATIONAL BEHAVIOR

Emotions and Moods

Reference: Robbins, Judge, and Vohra Organizational Behavior, 14th Edition
Dorling Kindersley (India) Pvt. Ltd, Authorized adaptation from the United States edition of *Organizational Behavior, 14e*

Lesson 4

Chapter Learning Objectives

- After studying this chapter, you should be able to:
  - Differentiate emotions from moods, and list the basic emotions and moods.
  - Discuss whether emotions are rational and what functions they serve.
  - Identify the sources of emotions and moods.
  - Show the impact emotional labor has on employees.
  - Describe affective events theory and identify its applications.
  - Contrast the evidence for and against the existence of emotional intelligence.
  - Apply concepts about emotions and moods to specific OB issues.
  - Contrast the experience, interpretation, and expression of emotions across cultures.

EMOTIONS

THE UNIVERSAL FACIAL EXPRESSIONS OF EMOTIONS

Nelson Mandela was an iconic leader who is famous for remaining cool under extreme pressure. He is known for his grace, self-awareness, composure, passion, a big sense of humour, and the ability to encourage others. Richard Branson, his long-time friend and Chairman of the Virgin Group, has said that he relied on Mandela's example during the pressures of the Virgin Atlantic deal and especially admired Mandela's ability to stay positive and focused and avoid harboring feelings of resentment.

Why Were Emotions Ignored in OB?

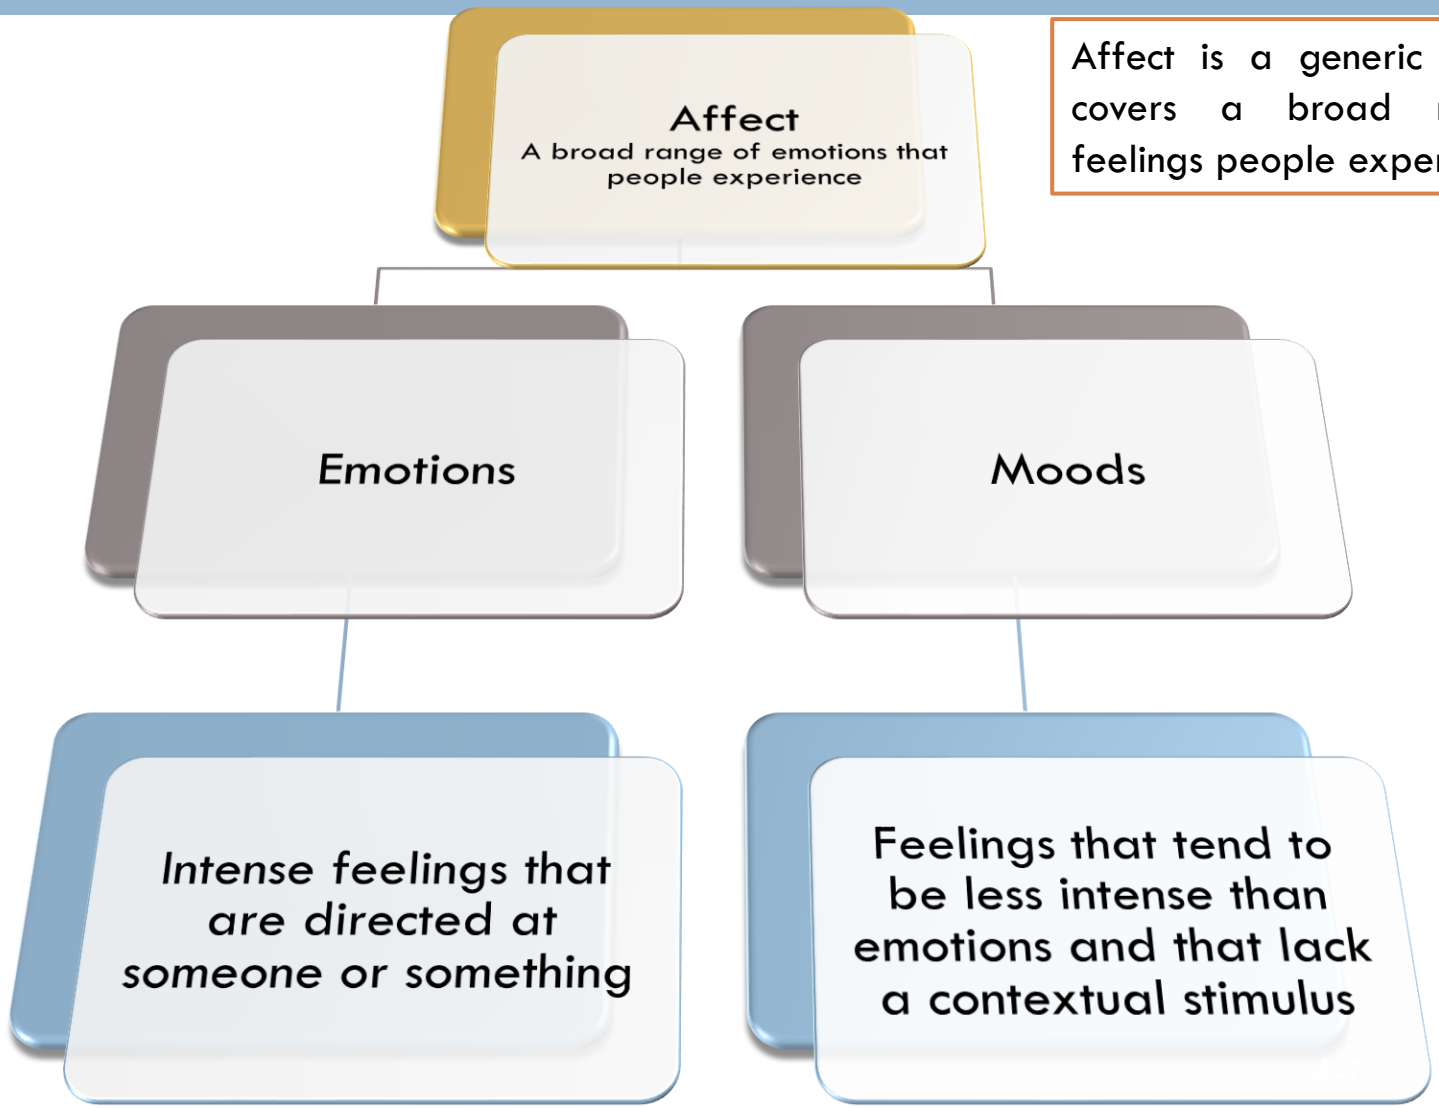
- The "Myth of Rationality"
  - Emotions were seen as irrational
  - Managers worked to create emotion-free environments
- View of Emotionality
  - Emotions were believed to be disruptive
  - Emotions were thought to interfere with productivity
  - Only negative emotions were observed
- Now we know emotions can't be separated from the workplace

Why Were Emotions Ignored in OB?

- Historically the study of organizational behavior has not given much attention to emotions. Emotions were typically seen as irrational so managers tended to work to make the workplace emotion-free.

- Often managers viewed emotions as disruptive to the workplace and therefore a hindrance to productivity. However, when thinking about emotions, typically managers were focusing on negative emotions. Even though there are some negative emotions that could hinder productivity, there is no doubt that workers bring their emotions to the workplace. Therefore, any study in organizational behavior would not be complete without considering the roles of emotions in the workplace.

What are Emotions and Moods?



Affect is a generic term that covers a broad range of feelings people experience.

Differences

Affect

Defined as a broad range of feelings that people experience. Affect can be experienced in the form of emotions or moods.

Emotions

- Caused by specific event
- Very brief in duration (seconds or minutes)
- Specific and numerous in nature (many specific emotions such as anger, fear, sadness, happiness, disgust, surprise)
- Usually accompanied by distinct facial expressions
- Action-oriented in nature

Moods

- Cause is often general and unclear
- Last longer than emotions (hours or days)
- More general (two main dimensions—positive affect and negative affect—that are composed of multiple specific emotions)
- Generally not indicated by distinct expressions
- Cognitive in nature

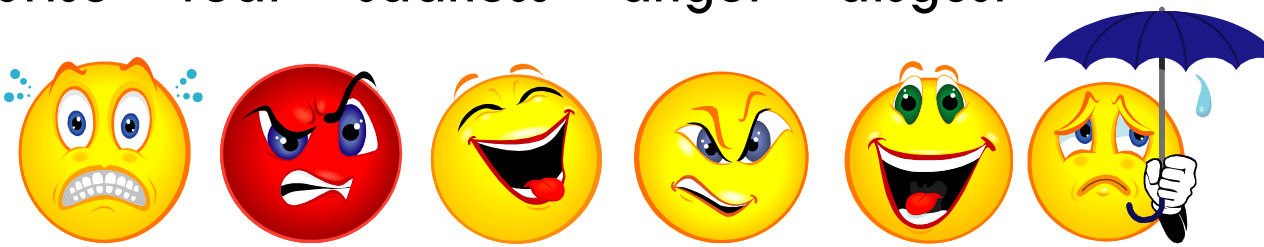
The Basic Emotions

- While not universally accepted, there appear to be six basic emotions:
  1. Anger
  2. Fear
  3. Sadness
  4. Happiness
  5. Disgust
  6. Surprise

Fear → feeling afraid. ...
Anger → feeling angry. ...
Sadness → feeling sad. ...
Joy → feeling happy. ...
Disgust → feeling something is wrong or dirty.
Trust → a positive emotion; admiration is stronger; acceptance is weaker

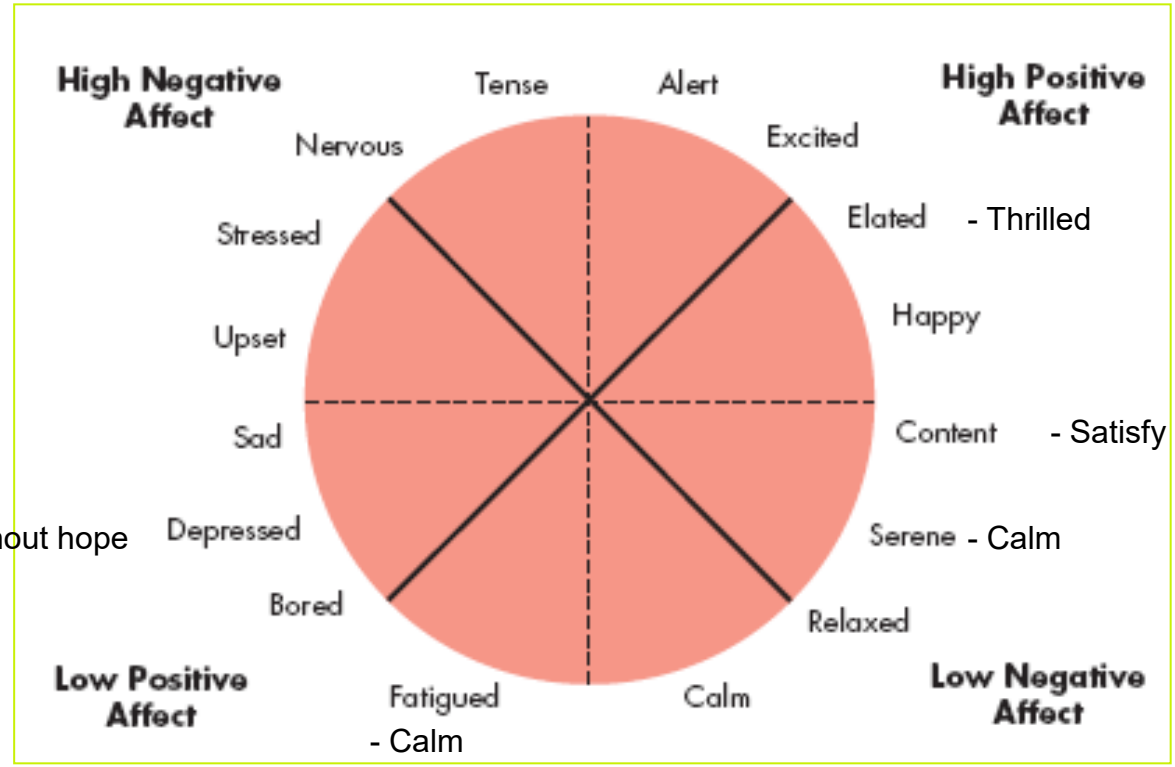
- All other emotions are subsumed under these six
- May even be placed in a spectrum of emotion:

  Happiness – surprise – fear – sadness – anger – disgust



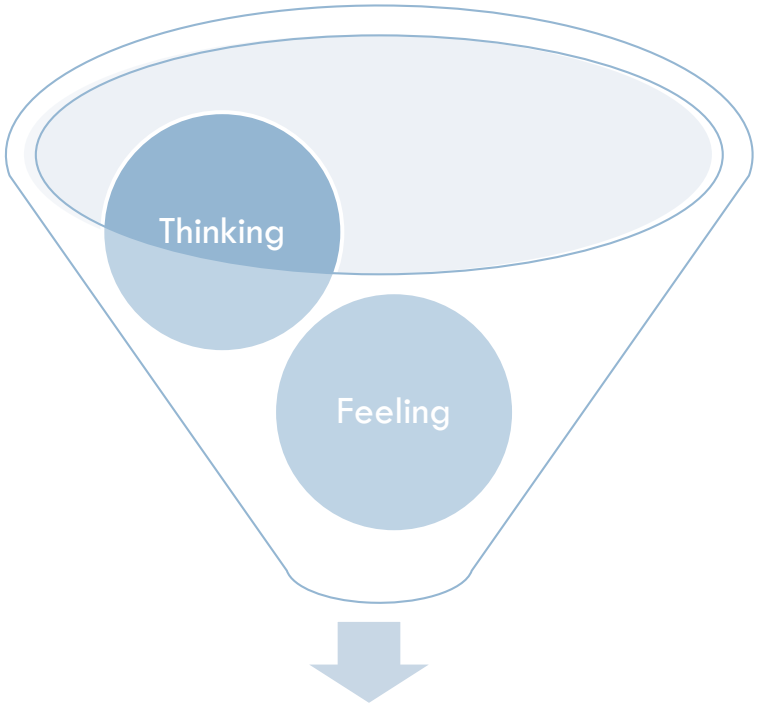
Basic Moods: Positive and Negative Affect

- Emotions cannot be **neutral.**
- Emotions ("markers") are grouped into general mood states.
- Mood states affect perception and therefore perceived reality.



What Is the Function of Emotion?

- Emotions can aid in our decision-making process. Many researchers have shown that emotions are necessary for rational decisions and need to incorporate both thinking and feeling.



Decision Making

Sources of Emotion and Mood

- Personality
  - There is a trait component – affect intensity
- Day and Time of the Week
  - There is a common pattern for all of us
    - Happier in the midpoint of the daily awake period
    - Happier toward the end of the week
- Weather
  - Illusory correlation – no effect (Weather is thought to have an impact on our emotions, but there is no proven effect.)
- Stress
  - Even low levels of constant stress can worsen moods.(It is important to maintain a low level of stress to help us control our psychological as well as our physical health.)
- Social Activities
  - Physical, informal, and dining activities increase positive moods

Intelligence quotient, Emotional quotient & Personality

Emotional intelligence is an essential part of the whole person.

- Emotional stability
- Extraversion
- Openness
- Agreeableness
- Conscientiousness

More Sources of Emotion and Mood

- Sleep
  - Poor sleep quality increases negative affect
- Exercise
  - Does somewhat improve mood, especially for depressed people
- Age
  - Elderly people tend to have fewer negative emotions.
- Gender
  - Women tend to be more emotionally expressive, feel emotions more intensely, have longer-lasting moods, and express emotions more frequently than do men
  - Due more to socialization than to biology

Emotional Labor

An employee's expression of organizationally desired emotions during interpersonal transactions at work.

- Emotional Dissonance:
  - Employees have to project one emotion while simultaneously feeling another (don't feel the emotion they are required to express)
  - Can be very damaging and lead to burnout frustration with the job
- Types of Emotions:
  - **Felt:** the individual's actual emotions
  - **Displayed:** required or appropriate emotions
    - ***Surface Acting***: Surface acting is when an employee displays the appropriate emotions even when they don't feel those emotions.
    - ***Deep Acting:*** Deep acting is when the employee actually changes their internal feelings to match displayed rules; this level of acting can be very stressful.

For example, waitresses are supposed to be friendly and cheerful, whether they are currently feeling that emotion or not.

New employees of the ward office in the city of Daejeon, South Korea, practice smiling during their training on how to be kind public employees. The strategy of surface acting, or "putting on a face," is an appropriate technique the employees learn for modifying their emotions that helps them create positive interactions with customers.

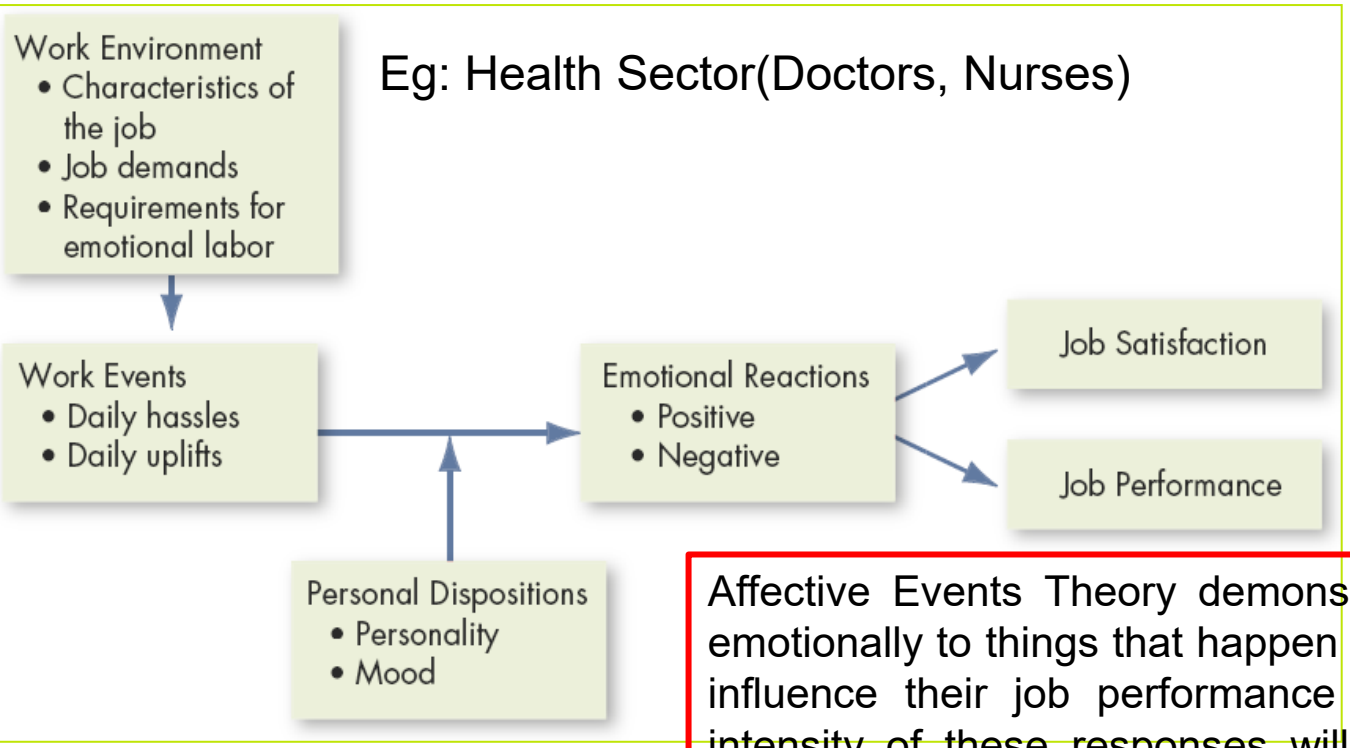
Affective Events Theory (AET)

- An event in the work environment triggers positive or negative emotional reactions
  - Personality and mood determine response intensity
  - Emotions can influence a broad range of work variables



Affective Events Theory demonstrates that employees react emotionally to things that happen to them at work and this can influence their job performance and job satisfaction. The intensity of these responses will be based on emotion and mood.

Implications of AET

1. When an employee has an emotional episode is actually the result of a series of emotional experiences triggered by a single event
2. Your job satisfaction is impacted by current and past emotions
3. As your emotions fluctuate over time, it will create variations in job performance.
4. Emotion-driven behaviors are typically brief and variable
5. Both negative and positive emotions can distract workers and reduce job performance

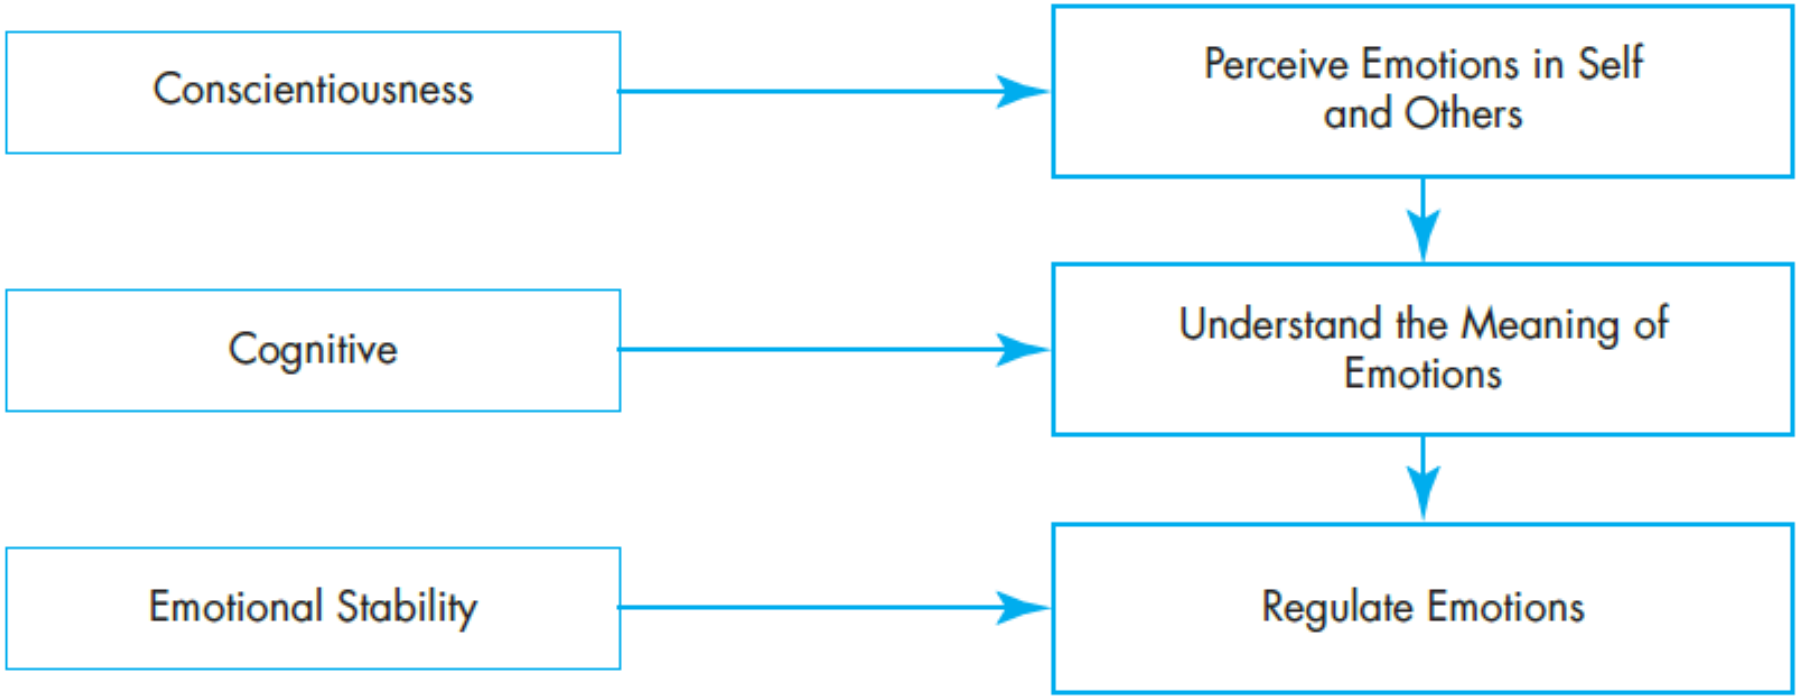
- *Emotions provide valuable insights about behavior*
- *Emotions, and the minor events that reason them, should not be ignored at work; they accumulate*

Emotional Intelligence (EI)

- A person's ability to:
  - Be self-aware (recognizing own emotions when experienced)
  - Detect emotions in others
  - Manage emotional cues and information
- EI plays an important role in job performance
- EI is controversial and not wholly accepted
  - Case for EI: Intuitive appeal, predicts criteria that matter, is biologically based
  - Case against EI: Too vague a concept, can't be measured, its validity is suspect

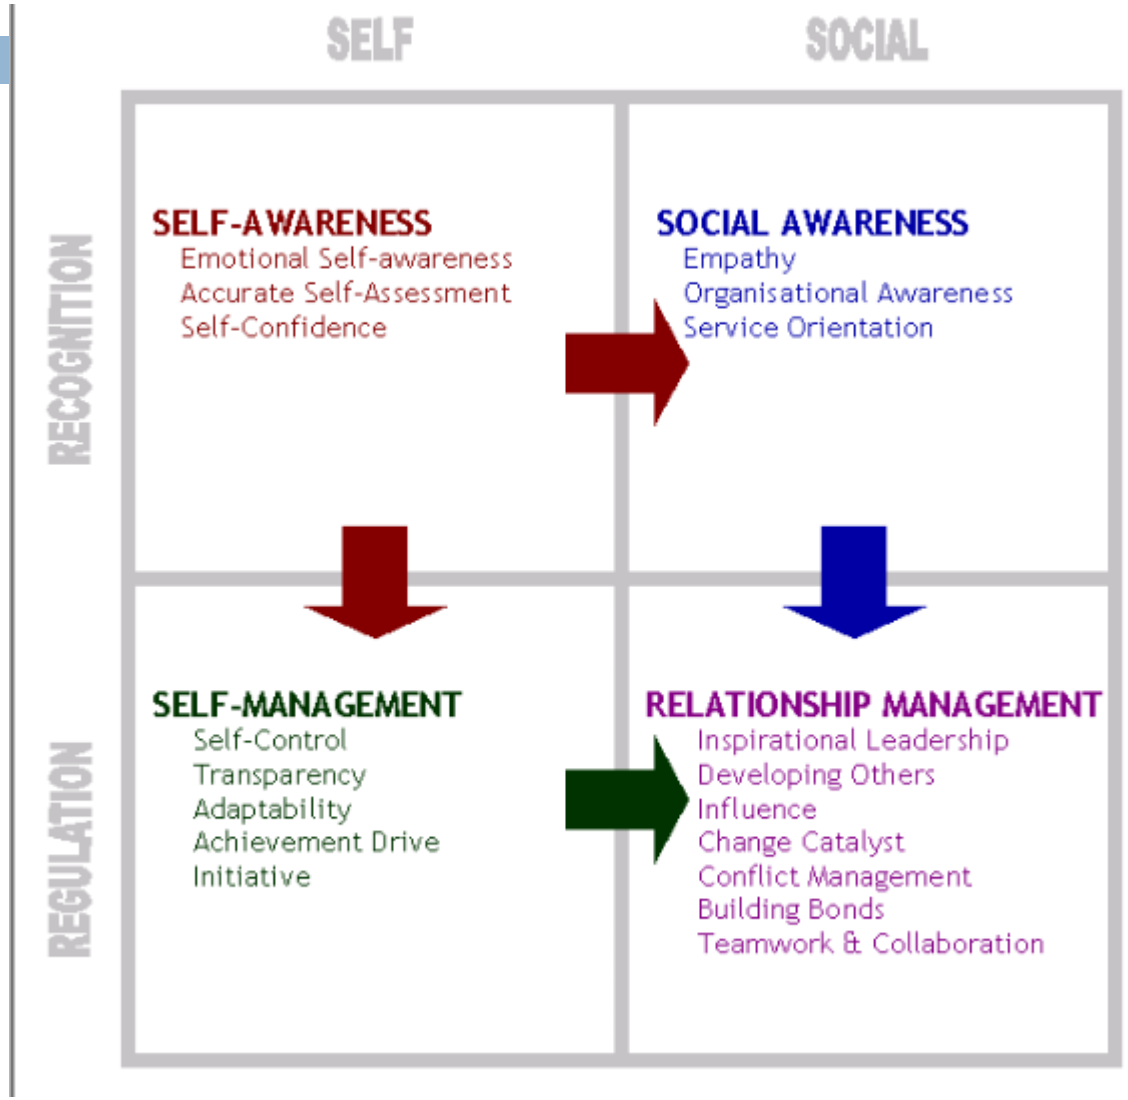
Emotional Intelligence (EI) is a growing area of study and is becoming increasingly important in the understanding of individual behavior. EI is pulling in one's understanding of emotions and their impact on behavior. An individual who is emotionally intelligent will have a strong sense of self-awareness, recognizing your own emotions when experienced.

EI Model



Conscientiousness
Cognitive
Emotional Stability
Perceive Emotions in Self and Others
Understand the Meaning of Emotions
Regulate Emotions

EI Model



SELF
SOCIAL
RECOGNITION
REGULATION
SELF-AWARENESS
Emotional Self-awareness
Accurate Self-Assessment
Self-Confidence
SOCIAL AWARENESS
Empathy
Organisational Awareness
Service Orientation
SELF-MANAGEMENT
Self-Control
Transparency
Adaptability
Achievement Drive
Initiative
RELATIONSHIP MANAGEMENT
Inspirational Leadership
Developing Others
Influence
Change Catalyst
Conflict Management
Building Bonds
Teamwork & Collaboration

OB Applications of Emotions and Moods

- Selection
  - Emotional Intelligence (EI) should be a hiring factor, especially for social jobs.
- Decision Making
  - Positive emotions can lead to better decisions.
- Creativity
  - Positive mood increases flexibility, openness, and creativity.
- Motivation
  - Positive mood affects expectations of success; feedback amplifies this effect.
- Leadership
  - Emotions are important to acceptance of messages from organizational leaders.

More OB Applications of Emotions and Moods

- Negotiation
  - Emotions, skillfully displayed, can affect negotiations.
- Customer Services
  - Emotions affect service quality delivered to customers which, in turn, affects customer relationships.
  - *Emotional Contagion*: "catching" emotions from others.
- Job Attitudes
  - Can carry over to home, but dissipate overnight.
- Deviant Workplace Behaviors
  - Negative emotions lead to *employee deviance* (actions that violate norms and threaten the organization).
- Manager's Influence
  - Leaders who are in a good mood, use humor, and praise employees increase positive moods in the workplace.

Implications for Managers

- Recognize that emotions are a natural part of the workplace and good management does not mean creating an emotion-free environment.
- To foster effective decision making, creativity, and motivation in employees, model positive emotions and moods as much as is authentically possible.
- Provide positive feedback to increase the positivity of employees. Of course, it also helps to hire people who are predisposed to positive moods.
- In the service sector, encourage positive displays of emotion, which make customers feel more positive and thus improve customer service interactions and negotiations.
- Understand the role of emotions and moods to significantly improve your ability to explain and predict your coworkers' and others' behavior.

Global Implications

- Do people experience emotions equally?
  - No. Culture can determine type, frequency, and depth of experienced emotions.
- Do people interpret emotions the same way?
  - Yes. Negative emotions are seen as undesirable and positive emotions are desirable.
  - However, the value of each emotion varies across cultures.
- Do norms of emotional expression vary?
  - Yes. Some cultures have a bias against emotional expression; others demand some display of emotion.
  - How the emotions are expressed may make interpretation outside of one's culture difficult.

Across cultures there do not seem to be differences in how people experience emotions. However, it is shown that in different cultures there are different interpretations of emotions. Some cultures are more accepting of emotional expression than others. When you are engaging with other cultures, be sure to understand their cultural norms.

Question 3: How do you react, what happens, when you believe that thought?

ANGRY		DEPRESSED		CONFUSED	HELPLESS	INDIFFERENT	AFRAID		HURT	SAD	JUDGMENTAL
irritated	loud	disappointed	masochistic	doubtful	incapable	insensitive	fearful	dreadful	crushed	tearful	stony
enraged	reactive	discouraged	stuck	uncertain	alone	dull	terrified	guarded	tormented	sorrowful	serious
hostile	swearing	ashamed	contracted	indecisive	paralyzed	reserved	suspicious	troubled	deprived	anguished	stern
insulting	abrupt	powerless	tight	perplexed	fatigued	weary	anxious	self-absorbed	pained	desolate	frowning
annoyed	quarrelsome	diminished	blocked	embarrassed	useless	bored	alarmed	rigid	tortured	unhappy	recoiling
upset	venomous	guilty	despairing	hesitant	inferior	preoccupied	panicked	phobic	rejected	lonely	glaring
hateful	irate	dissatisfied	hopeless	shy	vulnerable	cold	nervous	intolerant	injured	grieved	disgusted
unpleasant	short-tempered	miserable	grouchy	disillusioned	empty	lifeless	scared	disturbed	offended	mournful	unfair
offensive	stubborn	despicable	off	distrustful	distressed	uncaring	worried	disrupted	afflicted	dismayed	attacked
aggressive	rebellious	self-denigrating	moody	misgiving	pathetic	uninterested	frightened	intimidated	aching	downhearted	tactless
bitter	exasperated	self-hating	crabby	lost	distraught	unresponsive	timid	avoiding	victimized	oversensitive	hurtful
frustrated	impatient	sulky	faultfinding	unsure	doomed	tired	shaky	unwelcoming	heartbroken	dirty	bossy
controlling	contrary	low	resistant	uneasy	overwhelmed	robotic	restless	petrified	agonized	remorseful	stilted
resentful	condemning	terrible	punishing	tense	incompetent	slow	threatened	unbending	appalled	sullen	stiff
hotheaded	seething	lousy	morose	stressed	inept	sluggish	cowardly	paranoid	wronged	sour	brutal
malicious	scornful	desperate	cranky	uncomfortable	incapacitated		insecure	inhibited	humiliated	self-castigating	combative
infuriated	sarcastic	alienated	grumpy	comparing	shut down		wary	immobile	insulted	unworthy	pushy
critical	overbearing	bad	burdened	dishonest	cut off		menaced	attached	withdrawn	fragile	neglectful
mean-spirited	sharp	pessimistic	negative	superior	trapped		uptight	prejudiced	miffed	disconnected	stonewalling
violent	poisonous	dejected	closed	disdainful	weak		apprehensive	agoraphobic	indignant	devastated	rude
vindictive	insulting	bummed out	out of sorts	manipulative	sick		attacking	self-conscious	suffering	blindsided	ranting
sadistic	disrespectful	self-critical	no energy	judgmental	nauseated		defensive		distant	discontented	scolding
mean	jealous	self-deprecating	in hell	argumentative	fidgety				invaded	crying	shrill
spiteful	ticked off	gloomy	touchy	authoritative	trembling				bulldozed	groaning	hard
furious	hitting	glum	haggard	condescending	craving				bullied	moaning	fake
agitated	yelling	disheartened	drawn	demanding	hungry				secretive		phony
antagonistic	screaming	down	slumped	confounded	squirming				slighted		shallow
repulsed	revengeful	despondent	slouching	distracted	jittery				smothered		taut
mad	retaliating	cheerless	achy	disoriented	woozy				belittled		territorial
cross	reprimanding	rotten		off-kilter	twitching						complaining
incensed	envious			frenzied	compulsive						obsessive
				blushing							blunt
				awkward

Question 4: Who would you be without the thought?

OPEN	LOVING	HAPPY	INTERESTED	ALIVE	POSITIVE	PEACEFUL	STRONG	RELAXED
understanding	considerate	blissful	fascinated	playful	eager	calm	reliable	glowing
confident	affectionate	joyous	intrigued	courageous	keen	good	sure	radiant
easy	sensitive	delighted	absorbed	energetic	earnest	at ease	unique	beaming
connected	tender	overjoyed	inquisitive	liberated	inspired	comfortable	dynamic	reflective
free	devoted	gleeful	engrossed	optimistic	enthusiastic	pleased	tenacious	smiling
sympathetic	attracted	thankful	curious	frisky	bold	encouraged	hardy	grounded
interested	passionate	festive	amazed	animated	brave	surprised	secure	unhurried
satisfied	admiring	ecstatic	involved	spirited	daring	content	stable	open-minded
receptive	warm	satisfied	attentive	thrilled	hopeful	quiet	honest	efficient
accepting	touched	glad	observant	wonderful	upbeat	certain	composed	non-controlling
kind	close	cheerful	amused	funny	beautiful	relaxed	self-affirming	unassuming
harmonious	loved	sunny	thoughtful	great	creative	serene	truthful	trusting
empathetic	sweet	elated	courteous	giving	constructive	bright	supportive	supported
tolerant	gentle	jubilant	intent	sharing	helpful	blessed	excellent	fluid
friendly	compassionate	jovial	focused	intelligent	resourceful	assured	perseverant	light
approachable	caring	fun-loving		exhilarated	motivated	clear	responsible	spontaneous
outgoing	allowing	lighthearted		equal	cooperative	balanced	energized	aware
flowing	nonjudgmental	easygoing		excited	productive	fine	sane	healthy
flexible	appreciative	mellow		enjoying	exuberant	okay	complete	meditative
present	respectful	happy-go-lucky		communicative	in the zone	grateful	mature	still
listening	humble	glorious		active	responsive	carefree	solid	rested
welcoming	gracious	innocent		spunky	conscientious	adequate		waiting
embracing	patient	child-like		youthful	approving	fulfilled		laughing
	honoring	gratified		vigorous	honored	genuine		graceful
	expansive	euphoric		tickled	privileged	authentic		natural
	kindly	rapturous			adaptable	forgiving		steady
	grateful	in good humor				sincere		centered
		in heaven				uplifted		placid
		on top of the world				unburdened		
						confident		
						self-sufficient		

Summary and Managerial Implications

- Moods are more general than emotions and less contextual
- Emotions and moods impact all areas of OB
- Managers cannot and should not attempt to completely control the emotions of their employees
- Managers must not ignore the emotions of their co-workers and employees
- Behavior predictions will be less accurate if emotions are not taken into account

In summary, moods and emotions are important to the study of organizational behavior. Also, they are natural expressions and managers should not try to completely control the employees' emotions, but they should be aware of the emotions and not ignore emotional indicators. This is because the more you understand the emotions of your employees, the better you will able to predict their behavior.

Question ….

- There are numerous applications of emotions and moods. These include selection of employees, decision making, creativity, motivation, and leadership.
